

I hereby offer my support of XM Satellite Radio to broadcast local traffic and weather. I live and commute in hilly and mountainous terrain in Sothern California. XM allows me to receive a signal where terrestrial broadcasting cannot. Additionally, the XM weather and traffic are instantly available so I don't have to search for a local station and wait until they decide to transmit the information.

XM Satellite Radio is one of the most significant improvements in my life, please don't change it! As a two year subscriber to XM I would be hard pressed to function without it.

Sincerely,
Joe Burkholder
